Elezar

AUTONOMOUS HYPOTHESIS-DRIVEN THREAT HUNTING FOR SOC TEAMS.

Don't fall behind threats.

Attackers don’t stand still. Your SOC shouldn’t either. Sol autonomously hunts emerging adversary tradecraft across your existing stack and turns what it finds into defensive action.

CORE CAPABILITY

Autonomous threat hunting for modern SOC teams.

Elezar helps security operations teams continuously hunt for the threats that matter to their organisation.

Sol turns emerging threat intelligence into evidence-backed, hypothesis-driven hunts across the customer's existing security environment. It determines whether a threat is relevant, identifies the adversary behaviours that matter, and autonomously builds and executes hunts to test for them.

Threat Relevance

Determines which emerging threats matter to the organisation using its threat profile and operating context.

Procedure-Level Intelligence

Extracts evidence-backed adversary behaviours and ATT&CK procedures from current threat reporting.

Attack Path Context

Connects adversary procedures into realistic attack paths to provide context and improve hunting coverage.

AUTONOMOUS THREAT HUNTING

Evidence-backed hypotheses.
Continuously executed against your environment.

> **Scale threat hunting capability, not headcount.**

ALSO BUILT INTO SOL

Curated Threat Intelligence

Continuously maintained, structured and source-traceable adversary intelligence - no TIP overhead.

Sol AI Assistant

Threat context chat agent for threat research, engineering, investigation and incident response.

Threat-Led Templates

Create extensible products using Sol AI.

- Detection Analytics
- Tabletop Scenarios
- Red Team/Purple Team scenarios
- and more.

FROM THREAT TO ACTION

Set the direction. Sol does the rest.

Define what matters, connect your security stack, and let Sol continuously hunt relevant threats for your SOC.

01
DEFINE

Define what matters.

Create a Threat Profile that tells Sol which threats are relevant to your organisation.

You set the priorities.

02
CONNECT

Connect your security stack.

Connect the security tools and telemetry Sol can use to hunt across your environment.

You set the boundaries.

03
HUNT

Sol gets to work.

Sol continuously evaluates emerging threats, develops evidence-backed hypotheses, and autonomously hunts relevant adversary behaviour across your environment.

Sol does the hunting.

04
ACT

Stay informed. Take action.

Sol surfaces findings, defensive gaps and supporting evidence so your team knows what requires attention.

Your team stays in control.

> **Intelligence is not the output. Defensive action is.**

Built for security operations

One capability. Two ways to scale.

INTERNAL SECURITY OPERATIONS

Scale threat-led capability.

For SOC and threat teams turning emerging adversary activity into defensive action.

ALREADY HUNTING?

Increase the speed, frequency and breadth of threat-led hunting without proportionally increasing analyst workload.

BUILDING THE CAPABILITY?

Introduce repeatable, hypothesis-driven hunting without building a specialist function from scratch.

MSSPS

Scale threat-led services.

Extend managed threat hunting and CTI services across more customer environments using customer-specific Threat Profiles and autonomous hunting.

Your service. Your customers. Powered by Sol.

PROOF IN PRACTICE

One customer environment. One month. Real hunting output.

CUSTOMER ENVIRONMENT ACTIVITY

UNDERSTAND

From the broader threat landscape to what matters to this organisation.

420 threat reports curated and triaged

→ **42** threats determined relevant to this organisation

HUNT

Relevant adversary activity becomes deep, hypothesis-driven hunting coverage.

51 hunts executed across the customer environment

→ **191** attack paths assessed

→ **744** adversary procedures tested

ACT

Potentially meaningful activity is surfaced to the security team for investigation and defensive action.

21 findings surfaced to the security team

“We rely on Sol to look when we can’t.”

"Elezar's Sol provides great insight into the intersection of risky behaviours and complex threat actor techniques without having to assign six figures worth of resources to the task. We rely on Sol to look when we can't, and bring what is necessary to our attention, allowing us to focus our resources on proactive defence."

Micahael Carmody
Opusv CEO & Chief Solution Architect

Hunt continuously.

Keep pace as adversary tradecraft changes.

Prove your coverage.

Know what you can see—and where coverage breaks down.

Prioritise action.

Know what needs attention and why.
